November 1, 2011

TO: Prospective Buyers and Guests:

Welcome to the thirteen Southeast Missouri Show-Me-Select Spring Calving Replacement Heifer Sale. The May 2011 Sale averaged \$1764 on 120 heifers. The preg checks were started in late June and the open heifers from some of these herds were placed on feed and have already gone to market as finished cattle. There have been some \$2000 plus heifers at U.S. Premium Beef and they have averaged \$1550 on finished heifers.

The 126 heifers in this sale were started from 680 heifers that we have individually sifted and sorted. The breeding work is already done and some will start calving in 2 months. Guaranteed bred heifers, and not having to feed and take care of the heifer that did not breed is worth about \$250 - \$430 per heifer to you. Remember, those heifers are guaranteed bred for 30 days after you buy them. Contact the consignor before 30 days if you suspect one is open.

The genetics on most of these heifers is excellent with 6-7 generations of stacked pedigrees in several of the herds. Also some have been sending cattle to U.S. Premium Beef for processing and have carcass data on steer mates to the heifers. If you as a producer are wanting to develop a herd, 20 years of selections are already done on some of the consignments.

There are 98 black, 24 BWF, 1 gray, 1 red and 1 RWF heifer in the sale. There are 13 Registered Angus and 3 Registered Simmentals. 14 are also Tier 2 Heifers in the sale. 54% are A.I. bred.

There are three regions of the State in this sale. We have our top herds back, but also Crooks Farms from near Kansas City and Rich Vehige from north of St. Louis who are top selling farms in their regional sales are bring consignments to our Southeast Region Sale.

Consignors are listed in alphabetical order so the sale order will be different. The catalog has footnotes for your use. I have also included accuracy on the EPD's and also Carcass and Scrotal EPD's on AI sires. Remember, the higher the accuracy towards .90 or above the more reliable the data is in selection.

Thanks for attending the Sale, or just studying the catalog. If you have questions feel free to call me 573-243-3581, look at our website: semobeef.com, or call the consignor at the number listed.

Sincerely,

Roger Eakins
Livestock Specialist

General Information
Auctioneer - Ken Carney
Sale Agent - Fruitland Livestock Auction, Inc.

The sale order was determined by consignors drawing for a position in the rotation. Each consignor selected those heifers to sell in each rotation. Heifers will be sold in uniform lots sorted according to breed type, size and those selling together are expected to calve in a 45 day period. Heifers become the property of the purchaser immediately after the sale. Each animal will be at the purchaser's risk as soon as sold. The seller will aid in the loading of the cattle on instructions from the buyer, but at the buyer's risk. No cattle will be loaded until the conclusion of the sale. All fees will be collected by the Fruitland Livestock Auction, Inc. and are to be settled before loading.

GUARANTEE

All heifers are guaranteed bred and are guaranteed to remain pregnant for 30 days after the sale. Due dates are approximate. Females can range two weeks or more around due date even if they were AI bred. Heifers were pasture exposed to bulls after A.I.. Rectal Palpation for pregnancy is subjective and not exact because all cows vary in fetal development. A.I. pregnancies are not guaranteed but highly probable. Gestation length is based on average of 283 and can come very early or very late. Any heifer found open (by an accredited veterinarian) will be returned to the consignor and the money will be refunded by the consignor. Heifers are guaranteed against genetic defects on first calf only if inspected and documented by a veterinarian. All guarantees are made by the consignor of the cattle, not the sale committee or the SEMO Cattlemen's Association.

TAGS

All heifers in the sale are identified by a special tag that carries the "Show-Me-Select" trademark and name. This tag indicates that the heifers have met all of the requirements of the Missouri "Show-Me-Select" program.

CONTRIBUTORS

The sale committee and consignors wish to thank all those who have contributed to the success of this program. Your faith in our ability to make this program work is appreciated.

****NOTICE TO BUYERS****

All heifers in this sale have been Brucellosis calthood vaccinated between 4 and 12 months of age. All heifers in this sale have been vaccinated for Lepto at final pregnancy check. Necessary Health Paper to go to any state will be available on all heifers after this sale.

Requirements for Heifers in the December 2011 Replacement Heifer Sale

These requirements are designed to minimize the incidence and severity of calving difficulty and protect against potential reproductive losses. Heifers must be bred to service sires at or less than established birth weight EPD maximums, have a minimum pelvic area of 150 cm² prebreeding or 180 cm² at pregnancy examination, be a minimum body condition score of 5 on sale day, and meet established health guidelines.

Bred Heifers were managed under the following calendar:

Fall 2010:

- All heifers must be calthood vaccinated for Brucellosis.
- Heifers are vaccinated for IBR, PI-3, BVD, BRSV, and 7-way Colstridial. Label directions concerning initial vaccination and boosters must be followed.
- Use of implants is discouraged. If heifers are implanted, only FDA approved products for replacement heifers are allowed according to label guidelines.
- Long-term use of MGA is prohibited. Use of MGA for periods up to 14 days to synchronize estrus is permitted.
- Internal and external parasites are controlled as needed.
- Heifers must be polled or de-horned and completely healed by sale day.

Spring 2011:

- Pre-breeding reproductive examination is performed.
 - Reproductive tract scored, pelvic measured, weighed
- Heifers are vaccinated for IBR, BVD, Leptospirosis, and Vibriosis between 60 and 30 days prior to beginning of breeding. All vaccinations must follow label directions.
- Internal and external parasites are controlled as needed.

Summer 2011:

- Heifers are pregnancy examined to determine breeding dates. (Confirm AI pregnancy or natural service.)
- Heifers are treated for external and internal parasites within 30 days of sale date. Products for internal parasite control must have a label claim for all stages of the parasite life cycle.
- Heifers are examined on sale day by a final screening committee to eliminate blemishes (scarred eyes, frozen ears, short tails, rat tails).
- Heifers must be a minimum body condition score of 5 (1-9 scale) on sale day.
- Heifers have a final pregnancy check within 30 days of Sale.

Heifers must be bred to bulls with birth weight EPDs not greater than the guidelines for the following breeds based on the current genetic evaluation at the time of breeding for the respective breed associations:

Angus	7*	Gelbvieh	109*	Red Poll	1.5
Balancer	1.5	LimFlex	10.0*	Salers	0.9*
Beefmaster	-0.5	Limousin	11*	Shorthorn	.9*
Brangus	-0.7	Maine Anjou	+0.9	Simmental	10.0*
Braunvieh	8.5*	Polled/Horn Hereford	1.8*	SimAngus	-2.2*
Charolais	8.0*	Red Angus	9*	South Devon	1.1

*Calving Ease EPD - All others Birthweight

All sires used in conjunction with artificial insemination must have a minimum accuracy value of 0.6 on a scale of zero to one for the respective EPD's.

SPRING CALVING
Replacement Bred Heifer Sale
Dec 3, 2011 at 1:00 p.m.**

12 Heifers: 10 Black, 2 BWF
3 A.I. bred, due 2/16/12
9 natural bred, due 3/8 to 3/25/12

**BESAND & PECAUT
3258 Hwy B
Perryville, MO. 63775
573-547-8897**

We have 12 heifers available for sale this year, all farm raised. All but one are from cows that went through the Show Me Select program as heifers. Five heifers are sired by sons of Butch's Future Direction RA16, 3 heifers are from a son of B/R New Design 036, 2 heifers are from a son of S A F 598 Bando 5175, and 1 heifer from a son of B/R New Frontier 095.

Nine of the 12 heifers are bull bred to a son of S A F Bismarck 5682. Three heifers are A.I. bred to GAR New Design. One of the A.I. bred heifers is sired by A.I. bull ALC Big Eye D09N.

We want to keep the rest of our heifers, they make good cows!

All heifers that are called A.I. bred were pregnancy checked safe to the A.I. date, but are pasture exposed to the natural service sire.

Home raised, hand fed daily, very gentle black and black baldy heifers that are stylish, high performing females. Heifers will make tremendous cows that will raise a high performing calf and breed back every year. Steer mates have performed extremely well in the feedlot with excellent quality and yield grades. Several of the heifers are multi-generation Show Me Select, having dams and grand dams that are Show-Me-Select females; We are 13th year "Show Me Select Producers. Heifers are A.I. bred to SAV Bismarck with projected calving dates to be February 4 & February 23, 2012.

These heifers are Angus and Angus Hereford cross. One is a Predestined, two are out of Total and six are out of High Prime. The other two are sired by a good Hereford bull

The A.I. heifers are bred to Bextor, his daughters make moderate sized, good milking cows and his sons gain fast and exhibit a strong hip and hind leg. He ranks high in every value index.

The natural service sire is a New Design son with good EPD's.

All heifers that are called A.I. bred were pregnancy checked safe to the A.I. date, but are pasture exposed to the natural service sire.
